

Micro Commercial Components Corp.

Lead Free Policy

- MCC is committed to a global lead free environment.
- MCC's current definition of Pb free products are products that has no external lead (standard use in plating material). Products will still contain internal lead in the form of high temperature die/lead bonding solder. Remaining lead percentage by weight will vary by product products/packages. Detail Material Content List is available by request.
- MCC will offer RoHs compliance/Lead (pb) Free version for all our products/packages by Jan, 2005.

- MCC will discontinue production of Pb/Sn plating product by end of 2005. For customers with special requirement, pls contact : techsupport@mccsemi.com
- Customer must specify Pb Free products. Sn/Pb are considered the current standard products.
- Pb Free products are distinguished by suffix “P”. Example: 1N4007-TP
- There will be no specification changes other than the lead finish. Detail HIREL test data and SGS report are available by request.
- Pb Free and Sn/Pb products should be compatible with both Pb Free or Sn/Pb solder. However, slight adjustment to solder profile might be required depending on individual application.

For additional information, please contact your local MCC Sales Representatives or e-mail : techsupport@mccsemi.com
